

Jillian A. Parker, PhD

Current Position
Health Scientist II

Discipline Areas
> Toxicology
> Risk Assessment
> Occupational Health & Safety

Years' Experience
2

Joined Cardno
2018

Education
> PhD, Chemistry & Chemical Biology, Northeastern University, 2017
> BS, Biochemistry, Applied Mathematics Minor, The University of Akron, 2012

Summary of Experience

Dr. Jillian Parker is a Health Scientist with Cardno ChemRisk, located in Aliso Viejo, California, with 2 years of professional experience in the areas of toxicology and human health risk assessment. She received her BS in biochemistry from the University of Akron, where she conducted research focused on the structure and function of bacterial metal-binding proteins the effects of elemental silver on proteins. Dr. Parker then completed her PhD in Chemistry & Chemical Biology at Northeastern University, which was focused on protein chemistry, structural biology, structure-function relationships, intramolecular cellular signaling pathways, and small molecule and biological pharmaceuticals. Dr. Parker primary areas of practice include the safety, toxicology, and potential risks of personal care and consumer products, pharmaceuticals, and electronic nicotine delivery systems (ENDS).

Prior to joining the firm, Dr. Parker was employed as a Patent Agent and specialized in pharmaceutical and biotechnology intellectual property and litigation support. Dr. Parker is registered to practice before the United States Patent and Trademark Office (USPTO).

Significant Projects

Personal Care and Consumer Products

Conducted *in vitro* and *ex vivo* studies to evaluate various endpoints of concern, such as dermal irritation and hair loss, and performed exposure and risk assessments on ingredients and products of concern. Provided support and led research efforts to understand the toxicology, potential risk of exposure, and potential health risk of various ingredients and types of personal care and consumer products.

Pharmaceuticals

Performed and reviewed occupational safety assessments of numerous active pharmaceutical ingredients, which included preparation of occupational exposure limits, permitted daily exposures, and occupational banding assignments in accordance with ICH guidelines and industry standards.

Microplastics

Conducted a literature review of the state of the science for tire wear particles and crumb rubber. Research efforts included development of novel single particle analysis techniques for identification and characterization of microplastics, such as tire wear particles, in complex environmental sources and media to inform on the potential impacts on human health and the environment.

Pesticides

Assisted multiple clients in obtaining registration of antimicrobial products under the U.S. Environmental Protection Agency (EPA) Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and with state-specific agencies.

Nicotine Products and Premarket Tobacco Applications

Led toxicology- and microbiology-related research efforts for multiple electronic nicotine delivery systems (ENDS) products in preparation of premarket tobacco application (PMTA) submissions to the Food and Drug Administration (FDA). Developed testing rationale, performed data analysis, and drafted PMTA submission package sections related to these research efforts. Conducted microbial risk assessment of ENDS products.

Litigation Support

Provided consulting services involving asbestos exposure in various occupational and residential settings, including from personal care and consumer products.

- > Patent Agent, USPTO, 2017
- > Society of Toxicology (SOT) – Full member (since 2018)
- > American Society for Biochemistry and Molecular Biology (ASBMB) – Student member (2013-2017)
