

Kara A Keeton, MPH

Current Position

Supervising Health Scientist

Discipline Areas

- > Epidemiology
- > Environmental and Occupational Epidemiology
- > Monitoring and Evaluation

Years' Experience

7

Joined Cardno

2014

Education

- > MPH, Epidemiology, the University of Louisville, 2014
- > BA, Anthropology, Biology, the University of Louisville, 2012

Summary of Experience

Ms. Kara Keeton is a Supervising Health Scientist with Cardno ChemRisk. Her primary areas of training and expertise include epidemiology, statistical analyses, and human health risk assessment. She received her undergraduate training in anthropology and biology from the University of Louisville and completed her Master of Public Health degree in Epidemiology from the University of Louisville in 2014. She conducted her graduate practicum at the Tanzania Marketing and Communications Company, where she developed study designs, monitored surveillance data, and evaluated HIV/AIDS behavior change communication programs. Her main project focused on analyzing trends in HIV/AIDS survey data and HIV test results. In her current position, Ms. Keeton applies epidemiological concepts and methods to explore human health risks from environmental, occupational, and consumer product exposures. Specifically, she has research and consulting experience evaluating the relationship between nicotine and tobacco products, asbestos, talc, ethylene oxide, ethylene glycol ethers, and lead, and a variety of clinical and behavioral health outcomes.

Significant Projects

Regulatory Support

Provided regulatory support, which includes assistance with clinical study and research strategy oversight as well as preparation of submission documents, for electronic nicotine delivery systems (ENDS) and oral nicotine product companies submitting a Pre-Market Tobacco Application (PMTA) to the U.S. Food and Drug Administration (FDA). Lead a team of epidemiologists through a state-of-the-science evaluation of behavioral and clinical outcomes associated with tobacco and nicotine product usage and the impact of tobacco products of population health.

Epidemiology and Statistical Analysis

Assessed and compared U.S. pleural mesothelioma incidence rates and trends in men and women residing in urban versus rural areas using the National Cancer Institute's (NCI's) Surveillance Epidemiology and End Results (SEER) database and NCI's Joinpoint Regression software.

Conducted a quasi-experimental design using logistic and Poisson regression to determine the impact of potential exposures to crude 4-methylcyclohexanemethanol (MCHM) by potentially exposed pregnant women had on adverse birth outcomes.

Performed a systematic literature review and meta-analysis of non-occupational exposure to asbestos and the risk of mesothelioma. Pooled mesothelioma risk estimates were calculated and stratified for type of non-occupational asbestos exposure and/or predominant fiber type.

Performed a literature review and meta-analysis of occupational exposures to ethylene oxide and the risk of lymphohematopoietic and breast cancers. Pooled risk estimates were calculated and stratified by type of cancer, occupational groups, types of cancers within occupational groups, and decade of publication.

Analyzed cancer registry data to determine whether there was an elevated incidence of various cancers in a population surrounding a medical sterilization plant using ethylene oxide.

Exposure Assessments

Assisted in preparation of asbestos exposure assessments for a variety of products, including joint compound and friction products. Participated in a simulation study to characterize potential exposures to diacetyl in a small coffee shop during the preparation and consumption of unflavored coffee to determine if exposures exceed recommended occupational exposure limits. Prepared reports and publications based on findings of simulation studies.

Litigation Support

Reviewed and summarized case materials relating to environmental and occupational exposures to asbestos, occupational exposures to industrial solvents, and consumer exposures to cosmetic talcum products. Conducted literature reviews, provided support in the interpretation of relevant epidemiological studies, and reviewed government documents related to the products in preparation of expert testimony and support.

Provided and managed litigation support for cases involving potential occupational and non-occupational asbestos exposures resulting from the use or handling of historical asbestos-containing products, including joint compound, phenolic molding products, and friction products. Reviewed asbestos literature and case materials for use in the preparation of expert reports, testimony, and trial directs.

Membership to Professional Societies

- > Society for Epidemiologic Research (SER)
- > American Industrial Hygiene Association (AIHA)

Professional Honors/Awards

- > Recipient of American Industrial Hygiene Conference & Expo (AIHce)
 - > “Best of Session” Poster Award. Session 403. 2016 - Characterization of Naturally Occurring Airborne Diacetyl Concentrations Associated with the Preparation and Consumption of Unflavored Coffee

Invited Peer Reviewer

- > Journal of Exposure Science and Environmental Epidemiology, 2016
- > International Archives of Occupational and Environmental Health, 2019
- > International Journal of Environmental Analytical Chemistry, 2020
- > Environmental Science and Pollution Research, 2021
